ABSTRACT
        The annual report covers the sixth year of full scale
operation of the Institute of Library Research. It covers the
activities of the Institute including the completion of several
projects, the initiation of other projects, and the first full year
of the Library Systems Development Program. The major thrust of the
Institute during this period has been three-fold: first, to continue
to explore and search for a better understanding of how the needs for
information can be met through better library service; secondly, to
help the libraries of the University of California apply such
knowledge to their operational environment; and third, to continue to
meet the obligations and operational goals of the Institute during a
period of growing financial uncertainty and unfilled management
positions. (Author)

TABLE OF CONTENTS

ABSTRACT

This "Annual Report, July 1970 to
June 1971" is the fifth progress report of
the Institute of Library Research. It covers
the activities of the Institute including the
completion of several projects, the initiation
of other projects, and the first full year of
the Library Systems Development Program.

3

ANNUAL REPORT

JULY 1970 - JUNE 1971

INTRODUCTION

This report covers the sixth year of full-scale operation of the
Institute of Library Research.

The major thrust of the Institute during this period has been
three-fold: first, to continue to explore and search for a better
understanding of how the needs for information can be met through
better library service; secondly, to help the libraries of the
University of California apply such knowledge to their operational
environment; and third, to continue to meet the obligations and
operational goals of the Institute during a period of growing financial
uncertainty and unfilled management positions.

The Institute has continued to make contributions, even though
it was without the services of Associate Directors or a permanent
Director for most of this period, in the areas of research, development,
education, and public service. Most of this progress can be attributed
to three factors:

a.   Impetus of programs established in prior years.

b.   Solid contributions of Institute administrative and technical
     staffs during the past year.

c.   Institute guidance provided by campus advisory groups, the
     Library Council, and University personnel at various levels.

It is also appropriate that this issue of the Annual Report
recognize the culmination of several years of ILR leadership in
promoting a unified approach for the utilization of computers to solve
library problems. Through the mechanism of the Library Systems Development
Program (LSDP), the coordination achieved by the University of California
Library Systems Task Force (UNCLSTAF) has been channeled into a large
scale feasibility study of a <u>multi-year library automation development</u>
<u>program</u> to serve all UC campuses.

Areas of Interest

Institute projects help resolve needs and issues in the following
broad areas: values in library and information service, library and
information systems, methodology research, development of information
services, and social and professional issues. In addition, significant
actions have been taken to influence library processes by automation
and mechanization.

<u>Values</u>. Many tasks or services can be measured in terms of need
satisfaction. Other types of activity, including library and information
services are often difficult to assess. While the Institute program
has been concerned with the social and scholarly environment of the
library and other information activities, and with many aspects of value
determination, many questions remain. What goals are to be served? How
can the quality of library collections be assessed? How are books and
information used? What are the criteria for the design of library systems?
What is the value of library services in education, research, and
management, and how can it be measured? What is the relationship between
the value of services and the response time of them? What are the
problems in gaining acceptance of new services, both by the library and

its users, and how can they be solved? What are the values to be gained by in-service education of librarians, and what are the problems, motivational and otherwise, to be solved?

Systems. This program has been concerned with the nature of library and information systems, the definition of their components and of the interrelationships of those components at various levels from local to national. Projects in this area have included the analysis of present library organizations, experimentation with new or alternative forms and types of services, and the planning of new systems.

Methodology Research. This program has been concerned with the development of basic methods by which libraries and information systems can be designed and evaluated. Projects to date have studied the tools for development of vocabulary, for file indexing and organization, for cost accounting in information activities, for the measurement of file effectiveness, for definition of user needs, for evaluation of equipment and physical facilities, for the organization of catalogs, for the mechanization of union catalog preparation, and for the evaluation of library mechanization programs.

Development. The development of a general purpose capability for providing computer-based information services within the library, which can be utilized by any university activity desiring to establish an information center, has been a basic concern of the Institute. Establishment of a Center for Information Services will mobilize the intellectual facilities (knowledge of computer programs for language data processing, of man-machine communication problems, of analysis and simulation based on data files) of the campus for experimentation with advanced services that are being encompassed by university libraries.

Social and Professional Aspects. This program has been concerned
with the professional and social aspects of librarianship. It is intended
to support and extend the programs of the library schools through joint
faculty appointments and the employment of students as research assistants.
The Institute has experimented with the development of new curricula; it
has sponsored conferences, symposia, seminars, and special courses in
cooperation with University Extension. In addition, funds have been
separately sought to offer advanced post-graudate training programs
for practicing librarians and fellowships to bring experienced persons to
the Institute for work on specific research projects. It has undertaken
a research project concerning problems in education for librarianship,
and it has established projects requiring the talents of personnel from
several basic disciplines.

Library Systems Development Program

The Institute has been concerned with the development of a long term
plan and creation of an organization for the automation of university-wide
library functions for the University of California campuses. This plan
and associated proposal originated with a request from President Hitch
that the Institute of Library Research develop a program of mechanization
for the University's libraries. In response, a Library System Development
Program document was prepared and submitted to the University through the
Program Review Committee of the University of California Library Council.
This submission resulted in the establishment of the Library Systems
Development Program housed at Santa Barbara and funded by the University
to conduct library automation feasibility studies during fiscal year
1970-71.

4

ADMINISTRATION

The Institute of Library Research has two main branches, one at UC Los Angeles and one at UC Berkeley. A major project, the Library Systems Development Program, is located at UC Santa Barbara. The administrative structure of the Institute since October 1970 is as shown on Figure 1.

As an organized research unit of the University of California, the Institute of Library Research has been administered by a Director who also holds an appointment as a regular member of the faculty. In October of 1965, Professor Robert M. Hayes of the School of Library Service at UC Los Angeles was appointed the first permanent Director of the Institute, following the initial organizing period during which Professor Raymond C. Swank (then Dean, School of Librarianship, UC Berkeley) served as Acting Director. Because of other demands, Professor Hayes resigned as Director effective July 1, 1970. In July of 1966, Professor M. E. Maron was appointed Associate Director of the Institute with primary responsibility for the Berkeley branch, and administered activities there during the next four years. At the end of September 1970, Professor Maron also resigned from this position because of other responsibilities. During these years Professors Hayes and Maron led the Institute from a fledgling activity into the substantial statewide organization whose most recent activities are reported in this document. Both men have remained in contact with the Institute through their respective roles as Principal Investigators on individual projects.

1. University Faculty Committee: Review general ILR
   activities and provide guidance to Director.

2. LA Faculty Advisory Committee: Review ILR-LA activities
   and provide guidance to Manager.

3. Library Council: Review general ILR activities.

4. Program review Committee (of the Library Council):
   Guidance, policy review, and reporting of LSDP activities.

5. UC Library Systems Task Force: Technical review of
   LSDP activities and products.

6   9

For some time prior to these resignations, a search committee had been conducting a search for a permanent director. When the position remained unfilled, Professor William S. Cooper of the Berkeley faculty was appointed Acting Director of the Institute in October of 1970 to serve for the nine-month period until June of 1971. During this period, the search has continued but as of the time of writing of this report, no permanent director has yet been named.

Late in 1970, the Library Council passed a resolution to the effect that the Institute of Library Research should retain the main features of its present statewide structure, in which research, development, and other activities are included within the same organization. Following this lead, the Institute has during this transitional period made no substantial organizational changes, but has instead continued to pursue already established policies and directions. Within this framework, substantial progress has been realized in several directions.

Activities have continued as planned at the Los Angeles branch, where R. L. Carmichael has served as manager. R. M. Shoffner has continued to act as manager of Berkeley operations, and the Library Systems Development Program at Santa Barbara has continued under the managership of F. L. Bellomy. Activities, under investigators, directors, and managers, are organized along project lines with heavy use of student research assistants. The staff list for this reporting period, by project, is shown on Figure 2.

RESEARCH PROJECTS

Research projects were conducted at both branches of the Institute
during this reporting period. They included activities directed
towards identifying and documenting the basic problems in on-line
information storage and retrieval, creating programs and defining
formulas in text processing to derive the semantic foundations for
question-answering systems, and continued experimenting with data
bases stored on magnetic tape.

ORGANIZATION AND SEARCH OF BIBLIOGRAPHIC HOLDINGS RECORDS IN ON-LINE
COMPUTER SYSTEMS

Administrative

    Principal Investigator: Professor M. E. Maron

    Project Director: Ralph Shoffner

    Sponsoring Agency: Office of Education

    Period: 7/1/67 to 6/30/68   (Phase I)
             7/1/68 to 6/30/70   (Phase II); extended.

    Amount: $179,000 Phase I (completed)
             $309,873 Phase II (completed; documentation continues)

Purpose

    The purpose of this project was to develop and implement a
research facility that may be used to investigate problems of file
organization and interactive search for on-line retrieval systems
accommodating large files of bibliographic records in the MARC II
structure format. Various data bases, ranging in size from 500 to
94,000 records, have been created and stored on a direct access storage
facility (disk). Major areas of research, development, and experimentation

include: code compression for most effective storage representation of
the master files, multi-level inverted index structures for file access,
input conversion, analysis of file characteristics, facilities for
evaluation of complex Boolean search arguments and dynamic processing
of queries, and methods for handling certain classes of predictable
user input errors in search keys. During the current year the focus
of the work has been to organize the materials for the Final Report.

SEMANTIC FOUNDATIONS FOR QUESTION-ANSWERING SYSTEMS (SEMQAS)

Administrative

Principal Investigator: Professor Harold Borko

Project Manager: John Olney (Co-Investigator for Phase II)

---

[1] These reports are also listed under the Information Processing
Laboratory Project, since the work was jointly supported.

Sponsoring Agency: National Library of Medicine

Period: 5/1/70 to 4/30/71   Phase I
          5/1/71 to 4/30/72   Phase II

Amount: $21,185   Phase I
          $22,232   Phase II

Purpose

The purpose of this project is to computationally derive
linguistic data to be used for foundational work on the semantics
of languages suitable for question-answering systems and for fact
retrieval.   The major effort in Phase I was to obtain and analyze
data sets pertaining to run-on words and defining formulas.   Current
efforts in Phase II are to complete the semantic disambiguation of all
occurrences of defining formulas in W7 and MPD (two dictionaries
previously transcribed onto magnetic tape); complete the study of
coordination patterns among the formulas; provide rules for predicting
accurately the meaning effects of affixes; and experiment with semi-
automatic techniques for constructing semantic fields for medical terms.

     University of California, Los Angeles.   October, 1969.

Working Papers

Olney, John, et al.   Criteria and Procedures for Disambiguating
     W7 and MPD.   April 1971.

DEVELOPMENT PROJECTS

The Institute continued to exercise an important role in the development and introduction of new aspects of mechanization to the University of California libraries. University-wide activities initiated or planned through earlier Task Force efforts were expanded in scope and depth by the University of California Library System Development Program established at UC Santa Barbara by the Institute. The Los Angeles branch of the Institute vigorously continued the design phase of a Center for Information Services (CIS) and established experimental data base services. The University of California Union Catalog Supplement (UCUCS), a major project of the UC Berkeley branch of the Institute, progressed through the data base generation and publication planning phases.

UNIVERSITY OF CALIFORNIA UNION CATALOG SUPPLEMENT

Administrative

Project Director: R. M. Shoffner

Project Manager: Allan Humphrey

Sponsoring Agency: University of California

Period: 11/1/68 to 6/30/72 in three phases (First Supplement)

Amount: $100,000 Phase I (Completed)
$553,896 Phase II
$568,000 Phase III

Purpose

During the period 1963-1967, the libraries of the University acquired and cataloged over 1,020,000 titles which were new to the individual

18

nine campuses. The purpose of this project is to produce a book form Union Catalog by converting the bibliographic records of these new holdings to machine form and using computer techniques for its production. It is estimated that the Catalog will contain over 800,000 unique entries.

To achieve maximum value and re-use of the machine record, the project is committed to producing a MARC-compatible record, both as to structure and content. The machine record is created by an approach termed Automatic Field Recognition. In this system, no pre- or post-editing or tagging schemes are required; instead, computer algorithms work with the natural format of the catalog card to identify MARC-defined bibliographic data elements.

The first phase of the project, to develop and test a prototype production and programming system to verify the design concept, was done during 1969-1970. The second phase of the project is to perform the conversion and system processing on the entire file at a production rate in excess of 20,000 MARC II records per week. This phase began in October 1970 and will be completed in Autumn 1971. A third phase is also currently in progress whose goal is to upgrade the structure and error-free quality of the data, and to provide a graphic arts quality printed catalog. Production of this catalog is scheduled for completion in June 1972. Initial study of the problems of production of the second supplement (1968-72) is scheduled to begin January 1972.

                                Mr. Robert L. Carmichael (Phase IIB)

    Project Managers: Robert L. Carmichael - Institute of Library Research
                      Bruce Briggs - Campus Computing Network
                      Peter G. Watson - University Library

    Sponsoring Agency: National Science Foundation

    Period: 7/1/69 - 12/31/70 Phase IIA (Continued to 6/30/71)
            1/1/71 - 6/30/72 Phase IIB

    Amount: $208,400 Phase IIA (ILR)
            $300,056 Phase IIB (CCN): ($38,041 budgeted to ILR)

Purpose

The National Science Foundation, Office of Science Information Services, awarded Phase IIA of this grant to the Institute of Library Research of the University of California to initiate development of a "Center for Information Services" on the UCLA campus. The purpose of the Center is to provide a capability, in the University Library, to acquire magnetic tape data bases of a variety of kinds and, in cooperation with the Campus Computing Network, to provide various kinds of mechanized information services from them to the University community.

Phase IIA goals were to develop specifications for the Center, programs for the use of multiple data bases, and experimental experience with mechanized information services. Results are documented in the seven-part Phase IIA Final Report. Phase IIA was performed under the auspices of the Institute of Library Research with the joint participation of the Institute, the Campus Computing Network, and the University Library.

Phase IIB responsibility was awarded to the Campus Computing Network, as planned, when task emphasis changed to detailed program specifications and design, prototype development, and the offering of experimental data base services using interim software. Joint participation continues with the Institute principally concerned with coordination, documentation, reporting, test and evaluation, and the user interface. Basic Library concerns include service aspects, development of procedures, and acquisition of data bases. After Phase III installation and shakedown, project responsibility will then be transferred to the University Library for system operation, evaluation, and maintenance, with CCN and Institute support.

OPERATIONS TASK FORCE PROJECT

<u>Administrative</u>

Project Director: R. M. Shoffner

Sponsoring Agency: University of California

Period: 3/1/65 - Continuing

Amount: Budgeted from year-to-year

<u>Purpose</u>

The libraries of the University of California have been faced with many urgent problems for which generally applicable solutions must be found as soon as possible. The Operations Task Force Project was established to provide a state-wide agent for development of methods compatible with the needs of each campus, but applicable university-wide. Examples of the problems with which the Operations Task Force Project has been concerned include: (1) coordination of campus-based programs

for mechanization, (2) inter-campus circulation studies, (3) methods for producing supplements to the university-wide book catalog.

During 1969-70 a major planning effort was carried out in cooperation with the librarians and library systems staff of the nine campuses. The purpose of this effort was to define a concerted program for library mechanization and it led to the establishment of the Library Systems Development Program (LSDP) in July 1970. The Task Force functions concerned with coordination and management in the University of California were transferred to the LSDP project at that time. During 1970-71 the Task Force Project provided support to the ILR management, particularly in the coordination of on-going projects* with important future benefits to library automation.

LIBRARY SYSTEMS DEVELOPMENT PROGRAM

Administrative
    Program Manager: Fred L. Bellomy
    Sponsoring Agency: University of California
    Period: 7/1/70 - 6/30/71 (First Year)
    Amount: $124,000 (President's Office)
             $169,000 (University Libraries)
             $293,000

Purpose

The Library Systems Development Program (LSDP) was established in June 1970 as a project of the Institute with the Project Manager and the central development staff located on the UC Santa Barbara campus. The goal of this intramurally funded activity is to plan, specify, design, develop, and test computer based modules and subsystems for implementation on all campuses of the University of California. During fiscal year 1971

*These projects are reported elsewhere and include the Information
 Processing Laboratory, Center for Information Services, File
 ;anization, and Catalog Supplement Projects.

this project, which also assumed the functions of the earlier Task Force project, conducted a Feasibility Phase study at the request of the President's office. The primary objective of this activity was to detemine and to relate library costs, program benefits and alternate approaches as a basis for funding planned development activities. Eight major tasks were undertaken and the Program Review Committee of the UC Library Council provided project guidance and a reporting channel for LSDP during this period.

The first task was a study of potential cost benefits. It included, (1) an analysis of library functions to determine how great the replaceable costs might be and, (2) what may be the most comprehensive measurement (using cost accounting techniques) of existing manual library costs ever attempted by any organization the size of the University of California.

The second task was a study of potential service benefits. This included a questionnaire sent to a sample of 5000 UC Library users to assess their satisfaction with existing library services and their expectations for further growth. Along with this user's study an in depth analysis was performed of the service benefits which should be expected from the mechanization of the book ordering and circulation functions.

The third task was a study of alternate means for using computers for ordering and circulating books. The computing needs of all of the libraries were determined for these two functions and the capabilities of several computer configurations were simulated. The LSDP staff worked closely with the Coordinator of Computer Activities in the office of the UC President to insure that forthcoming recommendations would be in accord with the University's Master Plan for Computers.

The fourth task was a test of the proposed development methods. This test which envolves the development of a University-wide Subject Authority Control system is still in progress.

The fifth task was the installation of a mechanized project management system (now in operation), and the sixth task was to study the feasibility of integrating the UC funded Catalog Supplement Project into the LSDP Project. This Institute of Library Research (ILR) project has produced results of potential use to the LSDP Project, and efforts to make use of these are continuing. In a similar vein, the seventh task was to study the feasibility of integrating the extramurally funded Center for Information Services Project into the LSDP Project. This UCLA/ILR project is still in the early development stages and the long range implications for other UC Libraries are still being studied.

The final task (eighth) was the development of a UC Union List of Serials. This effort is progressing toward successful completion by December 1971.

The list of documents shown below does not include all of the reports published by the LSDP central staff and the individual task teams.

EDUCATION PROJECTS

A major component of the program of the Institute of Library
Research is the advancement of education in librarianship, information
science, and documentation. In part, the extent of the commitment of
the Institute to education is represented by the heavy use of students
on projects as research assistants. They have come from business
administration, from mathematics, from engineering, from English, and
from other departments, as well as from the two library schools.
Although most Institute activities directly or indirectly provide
knowledge or tools that advance education, the Institute has been
responsible for a number of projects designed to meet an educational
requirement. One project sponsored by NLM, "Education of Medical Library
Systems Analysts," has been especially successful and the administration
of this long-term continuing grant was transferred from ILR to the UCLA
Graduate School of Library Service at the beginning of this reporting
period.

AN INFORMATION PROCESSING LABORATORY FOR EDUCATION AND RESEARCH IN LIBRARY SCIENCE

Administrative

    Principal Investigator: Professor M. E. Maron

    Project Manager: D. Sherman

    Sponsoring Agency: Office of Education

    Period: 6/15/67 - 12/14/68 Phase I
              12/15/68 - 7/5/70   Phase II

    Amount: $141,763 Phase I
             $200,000 Phase II

Purpose

It is the objective of this project to design, implement, operate, and evaluate a computer-based laboratory that is to assist in meeting the educational and research needs of students in librarianship. The laboratory functions in an on-line, interactive setting provided by a network of remote terminals (both mechanical and cathode ray tube) linked to a central digital computer. Software developed to date emphasizes the demonstration and teaching of formal methods of intellectual access to stored information in addition to use of the computer in instructing students in topics of traditional librarianship.

Phase I of the project emphasized planning and initial program development. The major Phase I activities included implementation of a Time Sharing Monitor, Associative Search System, and Computer Assisted Instruction courses in Subject Cataloging. Phase II of the project emphasized operational aspects of the Laboratory and integration with Library School curricula. During the 1969-1970 academic year over 200 students in the Berkeley School of Librarianship utilized the Laboratory's three video terminals. The Laboratory's inventory of programs includes: Reference Search, Associative Search, MARC II Retrieval, and a high level computer language for writing Computer Assisted Instruction modules.

The work of the past year has been devoted to the organization of the Final Report material.

A STUDY OF THE NEEDS FOR RESEARCH IN LIBRARY AND INFORMATION SCIENCE EDUCATION

Administrative

Project Director: Professor H. Borko

Sponsoring Agency: U. S. Office of Education

Period: 4/24/69 to 4/30/70   (extended to 10/31/70)

Amount: $54,109

Purpose

The purpose of this study is to determine the needs for research

in education for librarianship, including consideration of library and

information science. It was submitted to the Office of Education with

the sponsorship of the American Association of Library Schools, as a

means for establishing guidelines and recommended priorities for such researc

---

[1] These reports are also listed under the File Organization Project,
since the work was jointly supported.

Reports

Borko, H. *A Study of the Needs for Research in Library and Information Science Education*. Final Report. Institute of Library Research, University of California, Los Angeles. October 31, 1970.

PUBLIC SERVICE

The Institute of Library Research has continued to service the
public sector through projects designed to serve libraries of the State
of California and of the nation; through discussions with people from
throughout the world; and through participation of its staff in
professional activities, Institute staff members have visited many
institutions and given talks and conducted seminars with diverse
audiences. Many visitors, foreign and domestic, visited the Institute
during the past year for discussions or study, and many requests were
received, and serviced, for copies of Institute papers and reports. A
continuing effort exists to establish projects whose results have
demonstrable utility in the areas of librarianship and information
science and to organize them so that this utility may be achieved.

LIBRARY ENVIRONMENTAL DESIGN: PHYSICAL FACILITIES AND EQUIPMENT.
(TISA WORK UNIT 02/014)

Administrative

    Principal Investigator: Professor G. Edward Evans

    Co-Principal Investigators: Professor Peter Kamnitzer
                                  Professor Thomas Vreeland
                                  Professor Ralph Iredale

    Sponsoring Agency: Department of the Army

    Period: 10/1/70 to 10/31/71 (extended to 12/31/71)

    Amount: $98,597 (Phase I)

Review and Status

    Phase I of this TISA Work Unit extends to 31 December 1971. The
result of this first year's effort will be a Final Report that contains

an evaluative state-of-the-art review of current library building practices. Areas in need of further research will be identified and alternatives to present practices suggested. Phase II of this effort as initially proposed to the contracting agency, if approved, would require three additional years and would culminate in a prototype of a guided inquiry system designed to take the user through all the steps necessary for the successful planning and completion of a required library facility.

The TISA Work Unit (Library Environmental Design: Physical Facilities and Equipment) is the result of contractual agreement between the Regents of the University of California and Department of the Army. Conceived as a joint effort of librarians and architects, the work is being carried out by the Institute of Library Research and the Urban Innovations Group at UCLA. This project is part of a series of TISA [Technical Information Support Activities] contracts with various groups. Preliminary discussions concerning the need for this full scale study on designing and equipping library physical facilities covered a two year period. A number of other groups were consulted and have some interest in the project. The Federal Library Committee and the American Library Association have the most active interest of any of the non-contractual parties.

Funds are controlled by the Institute of Library Research as are administrative matters. Project staff includes one investigator, three co-investigators, one consultant, one full-time project assistant, and three research assistants. Three quarterly reports on progress have been submitted to the contracting agency, the last an Interim Report containing partial drafts of the evaluative state-of-the-art

Final Report. As part of the administrative organization of the

project, an advisory panel of six members has been set up. Panelists

serve several functions: a) review and comment on the methodology

proposed for the study, b) suggest areas for further research,

c) read the draft of material prepared for the final report and present

comments. Two in-person meetings of the panelists, contracting

agency and Work Unit staff have been held; on 21 January 1971 at UCLA,

and 9 June 1971 at Corps of Engineers Headquarters in San Francisco. A

third is planned for 13 August 1971 at UCLA.
